

Data Structures and Algorithms Lab

03. Efficiency Analysis

Lab Code: 19ECSP201

Lab No: 03

Semester: III

Date: 28 Aug, 2019

Batch: C1

Question: Efficiency Analysis of Algorithms

Objective: Understanding Analysis the Machine way

1. Write a recursive program for Towers of Hanoi problem and record the time taken for following given input size. Use a spreadsheet application and plot a graph presenting your results. [10 Points]

| Si. No. | Number of Disks | Time Taken (sec) |
|---------|-----------------|------------------|
| 1. | 1 | |
| 2. | 2 | |
| 3. | 3 | |
| 4. | 4 | |
| 5. | 5 | |
| 6. | 6 | |
| 7. | 7 | |

2. Compare and present the orders of growth of linear search and binary search for the worst-case inputs for the given below input sizes. Use rand() function to generate the random array inputs between size 0 to 1000. Present your results using a spreadsheet application with an appropriate graph. [20 Points]

| Si. No. | Input Array Size N | Time Taken by Linear Search (sec) | Time Taken by Binary Search (sec) |
|---------|--------------------|-----------------------------------|-----------------------------------|
| 1. | 100 | | |
| 2. | 500 | | |
| 3. | 1000 | | |
| 4. | 5000 | | |
| 5. | 10000 | | |
| 6. | 50000 | | |

3. Write a program to find the first N prime numbers using the following methods:

- a. Naïve Approach
- b. Sieve Method
- c. Segmented Sieve Method

Plot the graphs for the following input size:

[30 Points]

| Si. No. | Number of Primes N | Naive (sec) | Sieve (sec) | Segmented Sieve (Sec) |
|---------|--------------------|-------------|-------------|-----------------------|
| 1. | 1000 | | | |
| 2. | 2000 | | | |
| 3. | 3000 | | | |
| 4. | 4000 | | | |
| 5. | 5000 | | | |

4. Write a program to find the length of a string using the following methods:

- a. Standard library function
- b. Using pointers
- c. Using recursion

You can use an online tool to generate random strings of the required length. Populate the below table and plot a graph:

[30 Points]

| Si. No. | Length of String N | Library | Pointers | Recursion |
|---------|--------------------|---------|----------|-----------|
| 1. | 1000 | | | |
| 2. | 5000 | | | |
| 3. | 10000 | | | |
| 4. | 50000 | | | |

**** Happy Coding ****
